PROFILE

EDUCATION & QUALIFICATIONS

A professional and detail-oriented chemist with experience in quality assurance, lab testing, and team leadership. Proven skills to deliver quality output within very short deadlines with high priority to sustainability and innovation. Skilled in risk evaluation, problem-solving, and communication.

Nottingham Trent University - Master's Degree Level 9 NFQ (JAN 2025 -PRESENT)

I am currently pursuing a postgraduate degree in chemistry. This delves deeper into matters of organic and inorganic chemistry, statistics, forensics, a lot of computer aided learning in chemistry and physical properties of solid state and Nano-composite materials and engages one in a lot of sustainable laboratory research.

Dedan Kimathi University of Technology - Bachelor's Degree Level 7 NFQ Second class honours (JUNE 2020- DEC 2023)

Studied different modules in my undergraduate studies. They include physical chemistry, chemical kinetics, chemical thermodynamics, petroleum chemistry, natural products, instrumentation chemistry, coordination chemistry and even mathematical modules mainly dealing with statistics.

PROFESSIONAL STUDIES

NOTTINGHAM TRENT UNIVERSITY- Sustainability In Practise (APRIL – 2025)

Read about sustainability and how it relates to my discipline of study. Specialised in three themes; food, clothing and energy. It also taught about personal values and what it means to be a transformative leader.

ALISON - Environmental Impact Assessment (JUNE 2024 - JULY 2024)

EIA is an evidence-based approach to evaluate potential environmental effects of a proposed project before its start. It identifies, predicts and quantifies likely effects on the environment such as air, water, land and human health. The main aim of an EIA is to inform decision-making, enhance sustainable development and minimize undesirable impacts through planning and management response. It is usually followed by public hearing and regulatory clearance to make it accountable and transparent.

Duke University, Fuqua School of Business - Impact Measurement and Management of SDGs (JUNE 2024 - JULY 2024)

SDGs is measuring, monitoring, and maximising the social, environmental, and economic contributions in alignment with the United Nations Sustainable Development Goals (SDGs). It assists organisations, governments, and investors in systematically assessing their contributions towards the global sustainability goals.

KEY SKILLS

1. I am a very good team leader and work to make sure every member of the team does achieve their level best in the teamwork.

2. I am a fluent and a confident speaker and do deliver my presentations well updated and to the best standards.
3. Strong inter-personal skills while sharing ideas and different views on various topics. This has made me build up a portfolio of very reliable sources and well-trained personnel across different fields.
4. I am able to provide well thought out ideas and solutions during critical times of pressure and also when experiencing turbulence at our facilities.
5. I am able to assess risks and come up with the best solutions to tackle the problem without putting any employee in any harm or danger.

WORK EXPERIENCE

Quality Analyst | Mac's Pharmaceuticals (Aug 2024 to Jan 2025)

The company mainly deals with the formulation and distribution of pharmaceutical drugs in the country and also across borders. It is also the first pioneering pharmaceutical company in both East and Central Africa. I did the following as my roles;

1. Carrying out in-process quality assurance checks in creams, capsules, tablets and liquid lines.
2. Sampling of intermediates and products retention.
3. Issuance, view and archiving of BMRs.
4. Handling of market complaints, deviations and change controls.
5. Review of GMP documents like SOPs and BMRs among others.
6. Preparation of training materials, training of staff and fellow interns.
7. Conducted factory production lines inspection.

Before I left for my postgraduate studies in the UK, I was offered a promotion to the regulatory department because of my excellent performance. This was a result of my meticulousness, which allowed me to streamline procedures and boost production efficiency, leading to quicker output and less time and resource waste.

Laboratory Analyst | KABANSORA MILLERS (Jan 2023 to Mar 2023)

The company deals with milling of both wheat and corn flours for both industrial uses and household uses both inside the country and across borders. Had experience in:

1. Aflatoxin and organoleptic testing
2. Bushel weight measurement and moisture content analysis
3. Food fortification control
4. Quality assurance of the final product.
